Reside in: Omsk
Citizenship: Russia, work permit at: Russia
Ready to relocate, ready for business trips

Desired position and salary

Software engineer

Specializations:
- Programmer, developer

Employment: full time, part time, project work, work placement
Work schedule: full day, shift schedule, flexible schedule, remote working
travel time to work: any

Work experience

February 2025 — till now

Quantum EVM

Cayman Islands, quantumevm.com/
Information Technology, Systems Integration, Internet
- Software development

Lead Developer

A company developing L1 blockchain infrastructure designed to withstand quantum-computing threats.

Designed and developed an EVM-compatible blockchain from scratch, using Cellframe as the L0 infrastructure and incorporating post-quantum cryptography. Adapted the Solidity compiler to support the new QuantumEVM specification. Independently implemented the blockchain core, developed a browser wallet, forked and customized a block explorer to meet the project's requirements, and built JavaScript infrastructure for interacting with the network.

Tech Stack:

Blockchain Core:
- C, C++, Rust.

Purity Compiler (Solidity fork):
- C++.

Infrastructure:
- JavaScript, TypeScript.

Block Explorer:
- Elixir, JavaScript, React.

Project Website:
- Linux, Nginx, Django, Python, JavaScript, HTML, CSS.

December 2024 — February 2025 3 months		**Kub 3** Saint-Petersburg, kub3.ru/ Odoo Developer A company specializing in custom module development for the Odoo ERP system. Developed API integration modules for various services, including integration with iiko restaurant automation software for an entertainment center. Extended the existing chat functionality in the user portal. Contributed to the redesign of order print templates. Tech Stack: - Python, Odoo, Owl.
January 2020 — November 2024 4 years 11 months		**Vidicode Inc.** USA IT, System Integration, Internet • Software Development • System Integration, Technological and Business Processes Automation, IT Consulting Lead Developer Outsourcing company specializing in Web development, information portals, lendings, services, scripts, rework, integration, deployment and further project support. Tech Stack: - Linux (Ubuntu), Nginx, Python, Django, Django Rest Framework, asyncio, aiohttp, Selenium, Celery, Redis, JavaScript, jQuery, HTML, CSS, MySQL, PostgreSQL, SQLite3, MongoDB, SQLAlchemy. Responsibilities: Code lifecycle: - Deploy applications for dev/prod environments. - Prompt response to emergency situations. Team Life Cycle: - Advised colleagues on Linux, Docker, Python, Django related issues. - Onboarding of new employees. - Mentorship - Participated in project architecture development. - Conducted overall performance and security audits of projects. Development: - Developed from scratch and further maintained an internal time tracker for employees. - Developed the API (Django Rest Framework). - Wrote documentation (including for the API using Swagger). - Implemented authentication systems (JWT, OAuth). - Rewrote legacy code from PHP to Django with the addition of new functionality (e.g. PDF generation, content moderation system, etc.). - Developed tasks with Celery. - Wrote JavaScript scripts in conjunction with jQuery for frontend. - Configuring logging (structlog, logging).

		Testing: - Wrote unit and integration tests (pytest, unittest) Configured and administered the infrastructure: - Worked with databases (MySQL, SQLite3, PostgreSQL, MongoDB, Redis for caching, ClickHouse). - Created tools to import/export data between different systems. - Administered Linux servers, performed performance optimization and resource monitoring. - Configured CI/CD processes for deployment of new project releases. - Configuring MTA (Postfix). - Configuring Nginx. Interaction with customers: - Presentation of technical solutions in English. - Agreeing edits and discussing TOR.
October 2022 — November 2023 1 year 2 months		**Efiko** Netherlands, efiko.io IT, System Integration, Internet • Internet Company (Search Engines, Payment Systems, Social Networks, Information and Educational, Entertainment Resources, Website Promotion etc.) • Software Development Developer A company specializing in Web3 solutions, providing outsourcing services as well as developing its own products. Worked on a service to collect data about the audience of clients' websites, including stored assets on crypto wallets (wallets, transactions, tokens, NFTs) for further analysis: The project itself is a dashboard for clients and a script embedded in websites that collects and sends data to the backend using an API. Tech Stack: - Backend: Django, Django REST Framework, Swagger, DRF Spectacular, MongoDB, MySQL. - Frontend: HTML, CSS, JavaScript, Bootstrap. - Embedded Script: TypeScript, Jest Docker was used for deployment. Developed a service for intuitive creation of smart contracts on the Stellar blockchain: Project - a service that adds additional code to a smart contract template written in Rust using Jinja tags according to user-defined parameters, then gives the user the code of the finished smart contract and allows it to be deployed on the blockchain. Tech Stack: - Backend: Django, Jinja, Stellar SDK, SQLite3. - Frontend: HTMl, CSS, JavaScript, jQuery, Bootstrap.

		- Smart contract template: Rust, Soroban SDK. Also for the same project I developed a bot for community Discord server. Participated in various outsourcing projects: - Created smart contracts for Stellar, Concordium, Stacks, Ethereum blockchains (Rust, Solidity). - Performed detailed analysis and vulnerability assessment of blockchain bridge with three smart contracts on Rust and Solidity. - Developed a smart contract for liquid steaking (Clarity).
August 2019 — November 2019 4 months		**Effective** Omsk, effective.band/ IT, System Integration, Internet • System Integration, Technological and Business Processes Automation, IT Consulting Fullstack Developer Developed an internal CRM for a company specializing in custom mobile and web development. About the project: CRM to keep track of employee time spent on specific tasks, as well as create invoices, store information about clients, team, costs and projects. Tech Stack: - Django, HTML, CSS, JavaScript, Bootstrap, SQLite3.

Education

Vocational secondary
